

ABSTRACT**SAFE EMERGENCY RELEASE DEVICE AND USE OF SAME**

5

The invention relates to an emergency release device (4) for a building closure operator (2) for decoupling a motorized building closure from a motor operator assembly (6, 9) under emergency conditions. To diminish the risk of injury by free-fall of a decoupled building closure wing by a simple and cost-effective design the invention proposes providing a safety or securing means (24) which safeguards or secures the emergency release device (4) against unintentional or unauthorized actuation.
